The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCR8), mutant (nonendogenous) versions of the GPCR8, and the polynucleotide sequences encoding them. The GPCR8 are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension, reflux disease, depression, magraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospaem, anaesthesia, myocardial infarction (MI), anxiety, prostatic hypertaplasia, epilepsy, prostate cencer, sequence encodes an endogenous human GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The present invention describes antigenic peptides (1) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular GC acids. Also described: (1) an assay for the detection of a particular GC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (1) an isolated antibody having high specificity and high affinity or aridity for a particular GPCR. (1) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are useful in the production of specific antibods. The peptides and antibodies are useful for diagnosing and designing drugs for gPCRs and antibodies are useful for diagnosing and designing drugs for creating immune-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, immunological-related disease, catherosclerosis, bacterial, fungal, protozoa or viral infections, crecoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host cinflammation, allergies, Crohn's disease, diabetes, graft versus host cancer, allerge, parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory consistent, relations renal disorders, rheumachoid arthritis, trauma, ulcers, or hypotension, renal disorders, rheumachoid arthritis, trauma, ulcers, or used in munoassays and immunoadiagnosis, ABZ42231 to ABZ42869 encode proteins given in ABP81675 to ABP82018, which are used in

```
The present invention relates to a method for predicting pathological conditions in heart failure using expression of one of 17 gene sequences (ADB67763-ADB67678); or protein sequences encoded by the genes (ADB67648-ADB67662). The proteins and genes are useful for diagnosis, treatment and prevention of heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTGGGCTTCTACGCCTACTTGGGCGTCCTGCTGGTGCTAGGCCTGCTGCTCAACACGCCTG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                541 TACCTGCCCTGGCCGTGGTCTTCTGCTCCCTGAAGGTGGTGACTGCCCTGGGCCCAG

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR pen of the invention; a mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR transgene or in an endogenous GPCR gene; cells derived from the trasngenic mice; kits comprising several mice, each of which has a mutation in a different GPCR polynucleotides of the invention. The invention intributed siscloses variants of the GPCR polyspetides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may comprise to the diagnosis, treatment or prevention of a wide variety of disorders of the adrenal gland; disorders (e.g., Alzhamer's disease, disorders of the adrenal gland; disorders (e.g., Alzhamer's disease, cancention; the adrenal gland; disorders of the colon or intestine syndrome); cardiocascular disorders (e.g., angina, cardiac arrhythmia or syndrome); cardiocascular disorders (e.g., angina, cardiac arrhythmia or syndrome); pleukemial); immune disorders (e.g., augina, cardiac arrhythmia or ALDS); bone and joint disorders (e.g., angina, cardiac arrhythmia or costeoprorsis); metabolic or nutritive disorders or the law or osteoporosis); metabolic or vitening, prostate, testis, skin, stomach, pancreas, spleen, thymwas and thyroid (e.g., cancers). The present sequence appeared or the present sequence appear did not form part of the printed specification; respectively form the abona were obtained in electronic formed the sequence argument disorders (e.g., cancers). The present disorders (e.g., ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TACATGAGCATCAGCCTGGTCACGGCCATCGCCGTGGACCGCTATGTGGCCGTGCGGCAC 360

cadherin or its fragment. The antibody is useful in preparing a
composition for treating or preventing a cancer-associated disorder. The
present sequence represents a gene upregulated in human colon cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibody that immunospecifically binds to p-cadherin, useful in preparing a composition for treating or preventing a cancer-associated disorder.

The invention relates to the use of human G-protein coupled receptor 35 (GPR35) for screening therapeutic agents useful in the treatment of cardiovascular disorders, liver and gastrointestinal diseases, cancer disorders, interactly diseases, metabolic diseases, hematological disorders, in a mammal. GPR35 is a G-protein coupled receptor (GPCR). The disorders, in a mammal. GPR35 is a G-protein coupled receptor (GPCR). The cherapeutic agents are screened by contacting a test compound with GPR35 cplypeptide, and detecting the binding of the test compound with GPR35 cplypeptide, and detecting the binding of the test compound to the specified diseases in a mammal, comprising determining the amount of the GPR35 polymucleotide in healthy and/or diseased mammals (CR spass) polymeleotide in a sample taken from the mammal, and determining the amount of the GPR35 polymucleotide in healthy and/or diseased mammals (CR seases in the mammal, comprising of the above specified diseases in the preparation of the pharmaceutical composition or for the regulation of GPR35 activity of the pharmaceutical composition or for the regulation of GPR35 activity or preparation of the pharmaceutical composition, comprising identifying the comparation of the pharmaceutical carrier. GPR35 regulator, determining whether the regulator ameliorates the cymptoms of the above specified diseases in a mammal, and combining the creening therapeutic agents for treating cardiovascular disorders, liver and gastrointestinal diseases, cancer disorders, inflammatory diseases, concerning therapeutic agents for treating cardiovascular disorders and urological disorders repiratory diseases, cancer disorders and mammal, e.g. humans (preferably), dogs, cats, cows, horses, rabbits, and mammal, e.g. humans cequally and the page of the page of the page of the page of the

This sequence is expressed in heamelapoletic/immune, gastrointestinal and reproductive tissues. HRAP has cytostatic, immunomodulatory, antiinflammatory, cardiant, antiarteriosclerotic, hepatotropic, antiarthritic, antidabetic, dereopathic, antiallergic, antianemic, antiatethmatic, antidabetic, dereopathic, antiallergic, antianemic and prevention of disorders associated with HRAP expression, especially eacil proliferative, autoimmune/inflammatory, reproductive, cardiovascular and gastrointestinal disorders (e.g. atherosclerosis, cirrhosis, leukaemia, cancer, AlDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and irritable
                                                                                                                                                                                                                                                                   cytostatic; immunomodulatory; antiinflammatory; cardiant; antianaemic; antiarteriosclerotic; hepatotropic; antiarthritic antirheumatic; antiasthmatic; osteopathic; antiallergic; antidiabetic; dermatological; neuroprotective; diagnosis; treatment; prevention; reproductive disorder; cardiovascular; call proliferative; autoimmune; inflammatory; allergy; gastrointestinal; atherosclerosis; cirrhosis; leukaemia; cancer; AIDS; arthritis; anaemia; asthma; dermatitis; diabetes; osteoporosis; multiple sclerosis; irritable bowel syndrome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human receptor-associated proteins (HRAP) useful for the diagnosis, treatment and prevention of cell proliferative, autoimmune, inflammatory, reproductive, cardiovascular, and gastrointestinal disorders.
                                                                                                                                                                                             Human receptor-associated protein cDNA from Incyte clone 3083742

The sequence of encoding G protein coupled receptor GPR35 (see AAY79576). The sequence of GPR35 is similar to that of a putative purinoceptor PSY99 (34.14 identity) suggesting that ATP or other nucleotide is its ligand. GPR35 mRNA was categorism that ATP or other nucleotide is its ligand. GPR35 mRNA was categorism that ATP or the ranscripts of 2.4 and 4.4 kb, whereas in the skeletal muscle there is a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite con a single transcript of 9.4 kb. The composite concludes the CAPNIO gene, which encodes a conception (see AAA27475) located within the NIDDM1 region of human concomes 2. This region also includes the CAPNIO gene, which encodes a convel calpain-like cysteine protease, designated calpain 10. Mutations in the CAPNIO gene are responsible for susceptibility to type 2 diabetes.

CC almed methods for screening for a propensity for type 2 diabetes conclude are based on detection of a polymorphism in a calpain encoding concluder are hand are also claimed for identifying modulators of calpain activity, and using these modulators to treat diabetes, in companion mediated glucose transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a biological species. The method comprises performing a global comparation of a group of expressed sequence tags (ESTS) known to be expressed in the phenotype/cell type of interest with all ESTS expressed in normal tissue in order to identify ESTS that are preferentially expressed in the phenotype/cell of interest. A method of the invention is useful for determining whether a nucleic acid is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably Arabidopsis or human. The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress-induced of the invention is also useful for determining the progression of colon cancer in a human, for detecting tumour cell, and for regulating or preventing the growth of a tumour cell, and for regulating or useful for detecting the absence or presence of peptides encoded by tumour-associated markers. A polypebide of the invention is useful as an animal. The present sequence encodes a continuous cell and the present encodes a continuous cell and the propersed of the invention is the continuous cell and the present encoded by the invention of the continuous cell and the propersed of the invention is the continuous cell and the propersed of the invention is the continuous cell and the propersed of the invention is the continuous cell and the propersed of peptides encoded by the invention of the invention of the continuous cell and the continuous cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               780
                                 The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated antigen (TAG) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAG, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAG, or related nucleic acid, antibodies or host calls, are also useful for diagnosis and monitoring of tumours. The present sequence represents the human GPR35
                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                  240

```
The present sequence is that of a 49,136 bp region located within the NIDDM1 region of human chromosome 2. It includes the CAPN10 gene that encodes a novel calpain-like cysteine protease, designated calpain 10, and a gene encoding a G protein coupled receptor, GPR35. Alternative splicing of calpain 10 mRNA generates a family of proteins. Isoforms 10a-16 (see ANY3957-74) are respectively encoded by exons 1-7,9-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11-13, 1-7,9-11,9-11-13, 1-7,9-11,9-11-13, 1-7,9-11,9-11-13, 1-7,9-11,9-11-13, 1-7,9-11,9-11-13, 1-7,9-11,9-11-13,

                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPP or OFF SHIANGED GFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunosessy to identify agonists and antagonists, as well as antibodies, ancisense molecules and siRNAs that can all be used to bind to and modulate expression of the cDNA molecules. As such, these

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3171
molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polymucleotide is a full length human cDNA sequence of the invention. NOTS: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the Buropean Patent Office, Vienna Sub-office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3172 GCCAACCTCCTGGTGTTTCGTGGTCTGCTTCCTGCCCTGCACGTGGGGCTGACAGTGCGC 3231

AAV58645), a novel member of the purinergic family of polypeptides and a
CP-protein coupled receptor. The invention provides GPR35A polymcleotides
CC having at least 70% identity with the present sequence, GPR35A
CC polypeptides, recombinant materials, and methods for their production.
CG GRR35A polypeptides can be used for identifying agonists and
antagonists/inhibitors, and for detecting diseases associated with
CC inappropriate GPR35A activity or levels. GPR35A polypeptides and
CC inappropriate GPR35A activity or levels. GPR35A polypeptides and
CC inappropriate GPR35A activity or levels. GPR35A polypeptides and
CC inappropriate GPR35A activity or levels. GPR35A polypeptides and
CC polymucleotides, agonists, antagonists and antibodies are used to treat:
CC polymucleotides, using it used:
CC polymucleotides activity or levels. GPR35A polypeptides and
CC polymucleotides in antagonists and antibodies are used to treat:
CC polymucleotides in uthary recention; cancer; diabetes; obeatty; anorexia;
CC hypertrophy; migraine; vomiting; psychotic and neurological disorders
CC dementia and severe mental retardation; and dyskinesias such as
CC Huntingdon's or Gilles de la Tourette's syndrome. The polynucleotide is
also useful as a source of primers and probes, and also for detecting the
